

Our company

We meet customer requirements with innovative, economical solutions. Thereby we convince with high process speed and proverbial reliability. This allows us to generate significant added value for the customer.

By constantly improving in all areas, we want to remain competitive in the future and secure our financial independence.

Our products are widely used in the safety sector of the automotive industry, which is another reason why we work according to the zero-defect principle. We avoid waste of any kind.

From an economic perspective, we attribute great importance to sustained profitability and corresponding self-financing.

Our customers

We maintain an honest, lasting, and sustainable relationship with our customers. Advanced, future-oriented products of high quality and environmental compatibility are an essential prerequisite for this.

Across all areas of cooperation, we live by the principle: "The customer is at the center". Through this and our pronounced innovative strength and speed, we distinguish ourselves from competitors.

Our employees

Our employees impress with their flexibility, willingness to perform, but above all with their responsibility and quality-conscious work.

Our corporate culture is characterized by an open culture of debate and error. Employees at all hierarchical levels are characterized by a high degree of commitment and decisiveness. With the resulting process speed, we create room for innovative solutions. In our daily work, we are tolerant in our interactions but determined in our actions.

By constantly promoting personal responsibility and through targeted further training, we want to maximize the potential of everyone at their workplace. For us, "communication" is not a duty - we aim to motivate through comprehensive information and thus further promote the high level of identification with our company.

Our partners

We strive for a partnership with our suppliers, as well as with public institutions. Their close involvement in the value-adding process is a key factor in the quality, safety and environmental compatibility of our products and processes.

We also cultivate this partnership in particular within the technology pool, which continuously communicates with external specialists. In this context, we also maintain close contacts with nearby universities of applied sciences.

Our environment

We use resources efficiently, minimize our impact on the environment and strictly comply with legal requirements. Through innovative technologies, we avoid waste generation as far as possible in advance. We dispose of the waste in an organized manner for separation, recycling, or disposal.

Occupational safety and health protection

By providing reasonable, proactive preventive measures, instructions, and information, we prevent occupational accidents, as well as work-related illnesses and health problems. We follow occupational safety guidelines and actively participate in health protection.

Information security

The information security management system maintains the confidentiality, integrity, and availability of information using a risk management process and provides interested parties with the confidence in the adequate management of risks.
